Dear ClearKote,

I want to tell you how much we appreciate your product. We have used your *ClearKote Quik Shine* on our solar cars for the past several years and couldn't be happier. Our car worth over \$500,000 and with 596 very fragile solar cells I'm sure you realize that we won't just use anything to clean it. We have tried several other products on the market but nothing compares to your *Quik Shine*. It is the only product we trust on our extremely delicate array. We I think it's fair to say that it beats the pants off RainX and all the other pretenders. We also love it because it's so easy to use and doesn't create build up on the cell which is very important as the build up would affect the efficiency of the solar cells. Not only that but it also makes the painted portions of our vehicle shine like brand new. We do dozens of outreach events each semester and need the car to always look its best. A few sprays and a quick wipe and it's ready to show.

I would like to also share with you a story from our last race the 2005 North American Solar Challenge. Before any solar car can race it must go through scrutineering so that the cars can be deemed safe. Because of the canopy's shape, solar cars don't use wipers and must pass a test for visibility. In this test our team was able to fly through scrutineering faster than any other team in part because of *Quik Shine's* superior water beading ability. This not only provides us with a safer car and excellent visibility but also allowed us additional time to prepare for the grueling race ahead.

We are currently building our 9th solar car that will race next summer in the 2008 North American Solar Challenge from Dallas, Texas to Calgary Canada. It has been designed to be the most reliable, efficient and technologically advanced solar car Team PrISUm has ever built. It will have a brand new, more powerful array with 719 cells we are pleased to say that we will only be using *ClearKote Quik Shine* on it. Thanks so much!

Sincerely,

M. Luke Martz
